Introduction

Scott McCollum

I'm pleased to provide this latest edition of the Information Technology Master Plan for FY22. Technology at Sinclair has undergone a lot of changes in the last year. In response to the COVID-19 pandemic we had to quickly change aspects of our operating model and support processes to address changes in the way employees work and in how their use of technology changed. Some of these changes were temporary and have already reverted to their prior model, some are still operating in this changed mode, and others are changing as we speak. We look forward to continuing to work with the college to make sure we are providing the best solutions for these changes at the most affordable cost.

While supporting the change to a mainly remote workforce required a significant amount of work over the last year, it wasn't the only thing that we worked on. There were a lot of other significant accomplishments in FY21. We did have to re-prioritize and delay some projects, but most of the work we had been planning previously was still completed. You can see a summary of these projects in the Prior Year Highlights section of this report. In addition we present metrics on the levels of service provided for the last year, as well as previous years, in the Operational Highlights section.

In Appendix 1 you will find a list of the FY22 projects that were identified through meetings with leaders throughout the campus. This list also includes Information Technology initiated projects that are being implemented to improve the performance, security and usefulness of the technical infrastructure of the college. Some of the more notable infrastructure projects include:

- The replacement of office desktop computers with docking stations, VPN devices, and laptops that will allow employees to work more effectively in a hybrid office/remote model.
- Installation of technology in new hybrid classrooms and conference rooms that will allow employees and students that are remote to attend classes and meetings with people on campus.
- New Self-Service Password Reset and Multi-Factor Authentication capabilities that will improve the security of the college network as well as user systems and data.
- A replacement Colleague server that will dramatically improve the performance of Colleague during peak utilization periods.
- A new My.Sinclair portal with integrated artificial intelligence capabilities to adapt the portal interface to individual needs, provide an improved search function, and provide assistance through a ChatBot tied to the college's knowledge bases.

I would like to thank the entire Sinclair community for their understanding and support over the last year. I would also like to thank the Information Technology staff for their flexibility and willingness to do whatever was necessary. It is a pleasure to work with you all and I look forward to another very successful year.
